ABSTRACT OF THE DISCLOSURE

An image processing method able to maintain the image display quality of a transmitting system during a channel conversion from a first channel to a second channel. A
5 first image signal and a second image signal are respectively transmitted to the transmitting system from the first channel and the second channel. A channel conversion request is sent to the transmitting system, controlling the transmitting system to stop transmitting the first image
10 signal and start transmitting a preset image signal. Finally, the preset image signal stops transmitting, and the second image signal starts transmitting.
